## EDUCATION

THE PENNSYLVANIA STATE UNIVERSITY | PA, USA

Fall 2025

- **Major:** Bachelor of Science in Information Technology
- **Concentration:** Application Development Cumulative GPA - 3.64
- **Relevant Coursework:** Data Structures and Algorithms, Artificial Intelligence, Machine Learning

## PROJECTS

### Terminal-based Note-taking App | React, JavaScript, IndexedDB

- Developed a local-first note-taking application using React, TypeScript, and IndexedDB with persistent offline storage capabilities.
- Implemented full-text search, tagging, filtering, autosave, and keyboard-first navigation to enhance usability and productivity.
- Designed 10+ responsive and accessible UI states, ensuring a seamless user experience across note creation, editing, and management workflows.

### JavaScript Event Loop Simulator | React, JavaScript, CSS/Framer Motion

- Built an interactive JavaScript Event Loop visualizer using React, TypeScript, and Framer Motion to demonstrate asynchronous execution concepts.
- Implemented step-by-step playback for callbacks, promises, and timers with synchronized visualization of the call stack and task queues.
- Created a modular, educational interface that simplifies complex JavaScript runtime behavior for developers and students.

### QuickBites | Food Ordering Website | React, JavaScript, CSS, Tailwind CSS, Shadcn-UI

- Built QuickBites, a responsive food ordering application using React and JavaScript with support for desktop and mobile devices.
- Implemented dark mode, reusable components, and an intuitive shopping experience to improve usability and interface consistency.
- Leveraged React's component-based architecture to create a scalable and maintainable frontend codebase.

### Personal Portfolio Website | JavaScript, HTML5, CSS3, Netlify

- Designed and developed a fully responsive portfolio website showcasing 4+ software projects, technical skills, and professional profiles across desktop, tablet, and mobile devices.
- Implemented intuitive navigation, dark mode support, and integrated links to GitHub, LinkedIn, and live project demos, creating a centralized platform for recruiters to evaluate technical work.
- Deployed and maintained the application on Netlify using Git-based version control and achieved Lighthouse scores of 90+ in Performance, Accessibility, and Best Practices.

## EXPERIENCE

### Full-Stack Web Developer Intern | Leaptech – Mumbai, India

May-Aug 2024

- **Engineered** core features of a full-stack **Django/MySQL portal** for children with disabilities, optimizing responsive design and accessibility across devices, which improved **page load speed by 35%** and compliance with **WCAG accessibility standards**.
- **Integrated** interactive educational modules (Autism Spectrum Disorder, Cerebral Palsy, Dyslexia) in collaboration with designers and developers, driving a **40% increase in session duration** and higher user engagement.
- **Optimized** backend workflows by debugging SQL queries and restructuring database schemas, cutting **query execution time by 50% (400 ms → 200 ms)** and **streamlining user management for 200+ registered users**.

## SKILLS

Java, HTML5, CSS3, JavaScript (ES6+), Python, SQL, React.js, Tailwind CSS, MongoDB, Git
